Mismatches between AUTOSAR document files and published checksum lists

Observations from retrievals from www.autosar.org on 28 October 2026

Author: Tobias Anton · antobimus@gmail.com

1 Summary

For each AUTOSAR release, www.autosar.org publishes checksum lists (SHA-256 or SHA-512) for the specification files. For the four files below, the file served at the published address does not match the checksum in the list for the same release. In one case, the file served for Release R4.3.1 is the specification of Release R4.1.3.

2 Method

- Each file and each checksum list was downloaded on 28 October 2026 over HTTPS from the addresses given below; every request returned HTTP 200.
- SHA-256 and SHA-512 were computed over the downloaded bytes with standard tools (shasum).
- In each checksum list, the line naming the file was located by its file name.
- The Last-Modified response header of each file was recorded.
- Each finding links to a www.autosar.org site search, filtered to its release, whose only result is that file.
- For the Meta Model (document 059), the addresses of all releases listed in the www.autosar.org document search, plus the FO and CP addresses for R25-11, were queried with HTTP HEAD requests (status and size only).
- To check whether a listed checksum belongs to another published file: on 28 October 2026 the www.autosar.org document search listed 4.369 entries (4.324 document files, 6 further entries for files listed twice, 39 checksum lists). Each of the four listed checksums occurs exactly once in the 39 lists, on the line of the file in question. 3.352 document files match another line of a list; the other 978 files (the four files of this report, the 968 files that no list covers and the 6 duplicate entries) and the 39 lists were downloaded and hashed.
- For the CAN Driver specification, the title page, page header, document change history and PDF metadata were read, and the file was compared byte for byte with the file served for Release R4.1.3.

3 Findings

File as served	Size / Last-Modified	Checksum list and line
R4.3.1/CP/AUTOSAR_SWS_CANDriver.pdf as found on site search here	2.151.005 bytes Thu, 20 Feb 2025 18:18:16 GMT	R4.3.1/CP/AUTOSAR_TR_ClassicPlatformSpecificationHashes.sha512 line 34 (SHA-512): Communication/AUTOSAR_SWS_CANDriver.pdf

4 Details

4.1 Specification of CAN Driver under Release R4.3.1

- The file served at https://www.autosar.org/fileadmin/standards/R4.3.1/CP/AUTOSAR_SWS_CANDriver.pdf identifies itself as “Specification of CAN Driver, V4.3.0, R4.1 Rev 3”: Document Version 4.3.0, Part of Release 4.1, Revision 3 (title page and page header). The last entry of its document change history is dated 31.03.2014 (version 4.3.0); the PDF metadata keyword is “Release 4.1”.
- It is byte-identical to the file served at https://www.autosar.org/fileadmin/standards/R4.1.3/CP/AUTOSAR_SWS_CANDriver.pdf (both SHA-256 98d8d7d3e31d44442cd9c67c2ad51033a96b238abd4d0f921885edd500a79f14, 2.151.005 bytes).
- The R4.3.1 checksum list names a different file for Communication/AUTOSAR_SWS_CANDriver.pdf (line 34). The R4.3.1 version of the CAN Driver specification therefore does not appear to be available at its R4.3.1 address. None of the 4.369 entries of the www.autosar.org document search has the listed checksum (Section 2).

4.2 AUTOSAR_FO_MMOD_MetaModel.zip under Release R25-11

- The file is served under the AP path (https://www.autosar.org/fileadmin/standards/R25-11/AP/AUTOSAR_FO_MMOD_MetaModel.zip), while the Foundation checksum list for R25-11 lists it as MethodologyAndTemplates/AUTOSAR_FO_MMOD_MetaModel.zip.
- The archive is 3.105 bytes and contains 8 entries (8.246 bytes unpacked): the folder AUTOSAR_FO_MMOD_MetaModel/ with _readme.txt, _disclaimer.txt (the general AUTOSAR disclaimer) and a .DS_Store file, plus macOS resource-fork entries under __MACOSX/. The meta model that the README announces is not contained.
- Its _readme.txt describes the archive as the document “Meta Model”, Document Identification Number 059, status published, part of the AUTOSAR standard Foundation, Release R25-11, dated 2025-11-27. The README thus assigns the file to the Foundation standard, which matches the Foundation checksum list (line 22) but not the AP path under which the file is served.
- No complete copy of document 059 for R25-11 was found: the Foundation address that matches the checksum list (R25-11/FO/AUTOSAR_FO_MMOD_MetaModel.zip) and the corresponding CP address both return HTTP 404, and the document search lists only the AP file for R25-11.
- For every earlier release in the document search, the Meta Model is served as a complete archive of 23 to 46 MB, for example R24-11/FO/AUTOSAR_FO_MMOD_MetaModel.zip (37.407.486 bytes) and R23-11/FO/AUTOSAR_FO_MMOD_MetaModel.zip (45.832.325 bytes). The R25-11 archive (3.105 bytes) is the only one without model content. None of the 4.369 entries of the www.autosar.org document search has the listed checksum (Section 2).

4.3 AUTOSAR_TR_FoundationChangeDocumentation.zip under Release R1.5.1

- The served archive (23 entries) differs from the checksum in the R1.5.1 Foundation checksum list (line 22). The same checksum list is also published under R19-03/FO with identical content. None of the 4.369 entries of the www.autosar.org document search has the listed checksum (Section 2).

4.4 AUTOSAR_TR_ClassicPlatformReleaseOverview.pdf under Release R4.3.1

- The served file identifies itself as Classic Platform Release Overview, Release 4.3.1, change history entry 2017-12-08. Its checksum differs from line 203 of the R4.3.1 checksum list. The file and the checksum list carry the same Last-Modified time (Tue, 18 Feb 2025 10:44:33 GMT). None of the 4.369 entries of the www.autosar.org document search has the listed checksum (Section 2).

5 Suggested follow-up

- Check which file is intended for the R4.3.1 CAN Driver specification and serve it at its R4.3.1 address.
- For the other three files, either update the checksum lists or restore the files they describe.
- For AUTOSAR_FO_MMOD_MetaModel.zip (R25-11), add the meta model announced in its README (document 059) under its Foundation address, as in R20-11 to R24-11, or confirm that the README-only archive is intended.
